## EJA110E Differential Pressure Transmitter

**DPharp EJA™**
**GS 01C31B01-01EN**

[Style: S2]

The high performance differential pressure transmitter EJA110E features single crystal silicon resonant sensor and is suitable to measure liquid, gas, or steam flow as well as liquid level, density and pressure. EJA110E outputs a 4 to 20 mA DC signal corresponding to the measured differential pressure. Its accurate and stable sensor can also measure the static pressure which can be shown on the integral indicator or remotely monitored via BRAIN or HART communications. Other key features include quick response, remote set-up using communications and self-diagnostics. FOUNDATION Fieldbus, PROFIBUS PA and 1 to 5 V DC with HART (Low Power) protocol types are also available. EJA-E series models in their standard configuration, with the exception of the Fieldbus, PROFIBUS and Low Power types, are certified as complying with SIL 2 for safety requirement.

### ■ STANDARD SPECIFICATIONS

Refer to GS 01C31T02-01EN for Fieldbus communication type and GS 01C31T04-01EN for PROFIBUS PA communication type for the items marked with "◇."

**● Total Probable Error (M capsule)**

±0.20% of Span @1:1 to 5:1 Rangedown  
Total probable error, known as a measure of the total performance of the transmitters under the condition of fixed line pressure.

$$\text{Total Probable Error} = \pm \sqrt{E_1^2 + E_2^2 + E_3^2}$$

E1: Reference Accuracy of Calibrated Span  
E2: Ambient Temperature Effects per 28°C change  
E3: Static Span Effects per 6.9 MPa change

**● Total Accuracy (M capsule)**

±0.17% of Span @1:1 Rangedown  
±0.33% of Span @ 5:1 Rangedown  
Total accuracy is a comprehensive measure of transmitter total performance, covering all major factors in actual installation, that cause errors in measurement.

As a standard measure, YOKOGAWA uses this to evaluate transmitter performance.

$$\text{Total Accuracy} = \pm \sqrt{E_1^2 + E_2^2 + (E_3 + E_4)^2 + E_5^2}$$

E1: Reference Accuracy of Calibrated Span  
E2: Ambient Temperature Effects per 28°C change  
E3: Static Span Effects per 6.9 MPa change  
E4: Static Zero Effects per 6.9 MPa change  
E5: Overpressure Effects upto overpressure 16MPa

Not only a day-to-day changes in temperature can affect the measurement and lead to unnoticed errors; fluctuation of line pressure, incorrect operation of three/five valve manifold leading to over-pressure events, and other phenomena can have the similar result. Total Accuracy factors in such changes and errors and provides much comprehensive and practical determination of how a transmitter will perform under actual plant operation.

**Square Root Output Accuracy**

The square root accuracy is a percent of flow span.

Output	Accuracy
50% or Greater	Same as reference accuracy
50% to Dropout point	$\frac{\text{Reference accuracy} \times 50}{\text{Square root output (\%)}}$

### Static Pressure Signal Range and Accuracy (For monitoring via communication or on indicator. Includes terminal-based linearity, hysteresis, and repeatability)

#### Range

Upper Range Value and Lower Range Value of the static pressure can be set in the range between 0 and Maximum Working Pressure(MWP). The upper range value must be greater than the lower range value. Minimum setting span is 0.5 MPa(73 psi). Measuring either the pressure of high pressure side or low pressure side is user-selectable.

#### Accuracy

##### Absolute Pressure

1 MPa or higher:  $\pm 0.5\%$  of span

Less than 1 MPa:  $\pm 0.5\% \times (1 \text{ MPa}/\text{span})$  of span

##### Gauge Pressure Reference

Gauge pressure reference is 1013 hPa (1 atm)

Note: Gauge pressure variable is based on the above fixed reference and thus subject to be affected by the change of atmospheric pressure.

\*1: HART 5 or HART 7 is selectable. Specify upon ordering.

\*2: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.  
Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

1. Model, suffix codes, and option codes
2. Calibration range and units
  - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. When reverse range is designated, specify Lower Range Value(LRV) as greater than Upper Range Value(URV). When square root output mode is specified, LRV must be “0 (zero)”.
  - 2) Specify only one unit from the table, ‘Factory setting.’
3. Select linear or square root for output mode and display mode.  
Note: If not specified, the instrument is shipped set for linear mode.
4. Display scale and units (for transmitters equipped with the integral indicator only)  
Specify either 0 to 100 % or ‘Range and Unit’ for engineering units scale:  
Scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. Unit display consists of 6-digit, therefore, if the specified scaling unit excluding ‘/’ is longer than 6-characters, the first 6 characters will be displayed on the unit display.
5. HART PROTOCOL  
When output signal code is “J”, specify the HART protocol revision “5” or “7”.
6. TAG NO (if required)  
Specified characters (up to 16 characters for BRAIN, 22 characters for HART, and 16 characters for /N4 tag) are engraved on the stainless steel tag plate fixed on the housing.
7. SOFTWARE TAG (for HART only, if required)  
Specified characters (up to 32 characters) are set as “Tag” (the first 8 characters) and “Long tag”<sup>\*1</sup> (32 characters) in the amplifier memory. Use alphanumeric capital letters.  
When the “SOFTWARE TAG” is not specified, specified “TAG NO” is set as “Tag” (the first 8 characters) and “Long tag”<sup>\*1</sup> (22 characters) in the amplifier memory.  
<sup>\*1</sup>: applicable only when HART 7 is selected.
8. Other factory configurations (if required) Specifying option code /CA, /CB, /CJ, or /CK will allow further configuration at factory. Following are configurable items and setting range.  
[/CA, /CJ : For HART communication type]  
  - 1) Descriptor (up to 16 characters)
  - 2) Message (up to 30 characters)
  - 3) Software damping in second (0.00 to 100.00)
[/CB, /CK : For BRAIN communication type]  
  - 1) Software damping in second (0.00 to 100.00)

## &lt;Information on EU WEEE Directive&gt;

EU WEEE (Waste Electrical and Electronic Equipment) Directive is only valid in the EU.

This instrument is intended to be sold and used only as a part of equipment which is excluded from WEEE Directive, such as large-scale stationary industrial tools, a large-scale fixed installation and so on, and, therefore, subjected to the exclusion from the scope of the WEEE Directive. The instrument should be disposed of in accordance with local and national legislation/regulations.
