BF362 CONVENTIONAL FIRE PANEL BARRIER INTERFACE

Installation instructions

The BF362 barrier interface unit is compatible with all C-TEC manufactured conventional fire alarm panels. It allows a zone of up to 10 intrinsically safe detectors and any number of manual call points to be used in hazardous environments such as gas plants. The unit should be connected to the fire panel and Zenner barrier as shown in the diagram below. Note that open and short circuit wiring faults on the hazardous side of the barrier will be shown as open circuit faults at the fire panel.

BF362 TECHNICAL SPECIFICATION
Quiescent current consumption: 2.8mA @ 30V;
Operating Voltage: Aux 24V from fire panel.
Dimensions: W 55 x H 55 H x D 18mm

Approved document no: DFU3620000 Rev 1 • E&OE
